Introduction

The Faculty Handbook states: ISU subscribes to American Association of University Professors (AAUP) guidelines and standards for part-time and non-tenure-eligible faculty, in effect as of 10/09/01, including the AAUP recommendation that part-time and non-tenure-eligible faculty appointments be limited to no more than 15% of the total instruction within the university and no more than 25% of the total instruction within any given department. Current ISU policy is available through the website of the Office of the Provost, at http://www.provost.iastate.edu/faculty/professors/, section 3.3.2.1.

In contrast to this official policy, Provost Hoffman reported to the Faculty Senate in April 2008 that for the past 6 years, the percentage of non-tenure-eligible (NTE) faculty at ISU based on student credit hours has remained constant at about 25% across the university. She also reported that in 40% of the departments, between 26% and 49% of the student credit hours are taught by NTE faculty. Due to the apparent disconnect between official policy and practice, a Task Force to examine this situation was established.

Charge—as transmitted to the task force from Faculty Senate President Clark Ford

The charge of the Task Force will be to examine current policy based on AAUP guidelines concerning limits on percentage of non-tenure-eligible faculty at ISU to determine if those limits are desirable and justifiable based on academic needs, budgetary limitations, and competitiveness with our peer institutions. If the current limits are found desirable and justifiable, the Task Force will make recommendations for policy changes to facilitate adherence to the current limits (including sanctions if necessary), and suggest a timetable for reaching these limits. If the current limits are not found to be desirable and justifiable, the Task Force will recommend and justify new limits. They will also make recommendations for policy changes to facilitate adherence to the new limits (including sanctions if necessary), and suggest a timetable for reaching those limits.
Background

The experience at Iowa State University with implementing existing policies and guidelines regarding percentages of NTE faculty led the Faculty Senate to establish a Task Force to examine this issue. The charge of the Task Force was to address the impact of current NTE percentages on teaching, on students, and on relationships with administration at departmental, college, and university levels.

This report to the Faculty Senate from the Task Force provides recommendations for consideration by the Senate for possible changes in the structure and interpretation of current policy and guidelines regarding percentages of NTE faculty.

We reaffirm the commitment of Iowa State University to the tenure-track system based on the following principles:

- Tenure is critical to the mission of the university to provide information to society that is not compromised by extraneous pressures; non-tenure-track appointments, therefore, undermine the tenure system, which is the foundation of academic freedom and provides the ultimate value of higher education to society.
- NTE appointments are often dollar-driven (for example, lecturers are paid less to teach more and clinical appointments are expected to earn their salaries through fee income).
- Quality of teaching can be compromised because NTE faculty appointments are usually selected from a less competitive pool.
- Non-tenure-track appointments seldom are the result of national searches and therefore are unfair to qualified persons seeking such positions who are unaware of openings.
- Continuing non-tenure-track appointments have the potential to create second-class citizens in the academy.
- Large numbers of NTE faculty providing instruction signals to the broader society that teaching is not a top priority of the institution, contradicting one of the core missions of Iowa State University.
- The frequent use of temporary teaching appointments disrupts the curricular continuity that exists when tenured and tenure-track faculty offer courses on a regular basis.
- Large numbers of non-tenure-track appointments increase the service burden on tenure-track faculty.

The American Association of University Professors (AAUP) has long recommended a policy that a university should self-limit the number of NTE teaching faculty to no more than 15% across the university and no more than 25% in any one academic department (http://www.aaup.org/cgi-bin/MsmGo.exe?grab_id=0&page_id=1932&query=non%20tenure%20eligible%20faculty%20percentage%20limits). This has been Faculty Senate policy for ISU since 2001 (see Faculty Handbook, section 3.3.2.1).

A message received from Anita Levy, of AAUP’s Department of Academic Freedom, Tenure, and Governance (February 9, 2009), stated (see Appendix):

With respect to Association-supported standards for contingent appointments, our 2003 statement Contingent Appointments and the Academic Profession (attached at your request) provides, "[r]ecognizing that current patterns of faculty appointment depart substantially from the ideal, the Association affirms its 1980 and 1993 recommendations that no more than 15 percent of the total instruction within an institution, and no more
than 25 percent of the total instruction within any department, should be provided by faculty with non-tenure-track appointments." The statement continues:

"For the long-term good of institutions and their students, the use of non-tenure-track appointments should be limited to specialized fields and emergency situations. Faculty who hold such special and emergency appointments should have the protections of academic freedom, due process, and fair compensation as described above. Special appointments refer, for example, to sabbatical replacements, substitutes for leaves of absence, or limited artist-in-residence appointments. Special appointments should not exceed a small percentage of all faculty appointments, and the Association’s allowance for special appointments should not be construed as an endorsement of the thousands of full-time non-tenure-track faculty appointments that now comprise over 30 percent of all full-time faculty positions."

While the limits within which Iowa State has been operating appear to be within Association-recommended standards, I also commend to your attention the series of steps provided in the attached statement for improving the conditions of faculty work, and for reducing your institution's reliance on contingent faculty.

Over the last eight years, Iowa State University has made essentially no progress toward reaching the goal of no more than 15% of teaching by NTE faculty. The reasons for this are complex and only partially budgetary. Tenured and tenure-eligible (TTE) faculty are under intense pressure to teach undergraduates, teach graduate students, do research, raise money to support their research, publish, and interface with the general public.

Many departments hire NTE faculty to reduce the teaching load of TTE faculty so they can meet their other ISU obligations. Some departments find the best way to satisfy a need for teaching important specialty subjects is to hire part-time NTE faculty. Others find that by having NTE faculty teach non-major service courses, their TTE faculty can focus on high-quality, upper-level teaching of subjects for which they are better qualified. Moreover, given market conditions for TTE faculty, it is more difficult to be competitive in hiring tenure-track faculty when teaching loads are increased.

A few departments have found the only way they can attract sufficient numbers of qualified faculty at all is to offer candidates the choice of an NTE or TTE position. Some departments simply do not have a sufficiently large budget to have TTE faculty do all the teaching. Many departments have taken on partner accommodation hires who do not seek tenure but contribute in important ways to their departments. Also, NTE appointments are a means to provide partner accommodations or a means to be competitive in TTE hiring. All departments rely on temporary instructors to fill in when faculty go on leave, retire, or resign, or who for other reasons no longer teach, but for whom permanent replacements have not yet been made.

The reasons departments hire NTE faculty differ across fields. In recognition of this fact, the NTE Teaching Task Force recommends that ISU policy shift the focus from campus-wide numbers to a department-focused approach that starts with the “health of the department.” The role of NTE faculty in creating and maintaining a healthy department varies greatly from discipline to discipline and is best assessed by each department in consultation with its respective Dean(s). In keeping with this conclusion, the Task Force recommends that each department establish an NTE teaching target (in consultation with their Dean(s)) and with the approval of the
Provost. This number should be what is judged to be optimal, given a department’s current and anticipated near-future situation as well as Peer-11 or other appropriate benchmarks. When the number of NTE faculty within a department exceeds the departmental target, this fact will be taken as a sign of suboptimal departmental health and be a subject for discussion among faculty, with the Dean(s), and with the Provost.

It is clear that the current one-size-fits-all percentage limit (maximums of 15% campus-wide and 25% per department) has not been met and that a more strategic and goal-centered plan that takes into account circumstances within a college, department, or program might lead to better results in meeting the overall percentage limits. In some departments/colleges, the lecturer/clinician positions are absolutely necessary and the reasons for having them are not always the same. In some areas (e.g., Department of Clinical Veterinary Medicine), the clinical positions are needed to recruit and retain faculty who want to continue their specialty practice but in an academic setting so that they can teach and contribute to the generation of new knowledge. In other areas (e.g., College of Human Sciences, College of Liberal Arts and Sciences), the lecturer positions are needed because some of the best teachers do not always want to deal with the dialectical forces of teaching and getting tenure, especially at a time when their personal lives and their professional lives compete for attention.

Many NTE faculty perform their duties well and are highly valued in their departments. In several parts of the university, NTE faculty (lecturers/clinicians) not only are making an excellent programmatic contribution, but student evaluations consistently indicate that these lecturers are among the highest-rated classroom teachers in their departments. In other areas, either (a) tenured/tenure track faculty prefer not to teach entry-level courses so those are often taught by lecturers (if not by graduate students), or (b) the department uses the NTE faculty to reduce the non-research responsibilities of new TTE faculty who need time to establish their research programs.

In some departments, NTE faculty do as much committee work as TTE faculty (for example, our task force has representation from NTE faculty, as does the Faculty Senate and many other university, college, and departmental groups and committees), while in other departments NTE faculty do not participate in committee work, thus increasing the committee work load for TTE faculty.

There is a clear and important place for NTE faculty in teaching at Iowa State University, but the number of NTE faculty in each department needs to be determined at department and college levels. We propose that this level be determined by consultation between each department and their Dean(s) and approved by the Provost.

The overall value of NTE faculty is extremely high, but in keeping with the concerns voiced by the AAUP and the Faculty Senate, our task force is concerned about exploitation of NTE faculty, including the low salaries they are paid in some departments. The proportion of TTE faculty must remain high enough to allow departments to function smoothly and to maintain a critical mass of long-term faculty who sustain high levels of research productivity, teaching, and professional practice and service, and thereby maintain and enhance the reputation of Iowa State University as a center of academic excellence.
Recommendation

We reaffirm the AAUP guidelines as a goal, as established in the Faculty Handbook, that part-time and non-tenure-eligible faculty appointments should not be assigned more than 15% of the total instruction within the university, and no more than 25% of the total instruction within any given department.

With this goal in mind, as well as the recognition that different departments have different needs, we recommend that the Faculty Senate consider establishing, in conjunction with the Office of the Provost, a department-level Department Responsibility Statement (DRS) equivalent of the individual faculty Position Responsibility Statement (PRS).

The purpose of this DRS is to allow each department to establish benchmarks and targets for the FTE or head-count number of NTE positions appropriate to address the current and short-term future needs (e.g., for a 3-year period) of that department. Alternatively, the department may calibrate its need for NTE faculty in terms of appropriate levels of student credit hours, courses, or sections that should be taught by NTEs. Each DRS may be renegotiated at the request of the department.

To allow this system to work, the following features should be incorporated into a formal procedure.

- Each department is to prepare a document that identifies a target or benchmark of NTE teaching effort that is optimal for its particular situation. This number should be agreed upon in discussion with the relevant Dean(s). Justification will be provided for the department’s NTE teaching target and for revisions arrived at in consultation with the Dean(s). When the departmental target is greater than 25% of overall instruction, particular attention should be paid to justification of this large percentage.

- Each department must submit to the relevant Dean(s) a written explanation for why exceptions to this target are necessary in a particular year. These explanations should consider program accreditation requirements, which may require TTE rather than NTE positions and may provide a means for departments to argue for increased TTE faculty numbers. Valid explanations might also include a need to take the load off of new TTE faculty to increase their chances for attaining tenure, for partner accommodations, and for other reasons agreeable to the faculty of the department.

- Within departments, decisions regarding NTE allocation will be made cooperatively by department faculty in coordination with the department chair and in accordance with provisions of the department’s and college’s governance document.

- The proposed structure should be implemented by Fiscal Year 2010/11 and remain in place until modified by mutual agreement of the Faculty Senate and the Office of the Provost.

- The proposed structure will be monitored through institutional records measuring the impact on the quality of teaching within the department and the “health” of each department’s NTE situation relative to that of other departments and relative to that department’s previous situation.

- For each department, an appropriate Faculty Senate committee or council will review, at least once every 3 years, the terms for the DRS and the NTE posture of each department, and recommend “enforcement” through appropriate remedial actions by the Office of the Provost.

- To avoid exploitation of any Iowa State University employees who engage in instruction, the provisions of this document shall be assumed to include an appropriate mix for each department of all instructional categories (TAs, postdocs, NTEs, TTEs, and P&S).
Because the cost of NTEs is highly variable, both within and across departments, the college Deans will need to maintain adequate levels of funding to provide NTE support to departments with demonstrated need.

Expectations for research by NTE faculty based on the scholarship of teaching will be clarified within each department and program through discussions involving faculty and department chairs and program administrators, with such expectations varying by department and program as provided in the DRS document. PRS documents also should clarify the expectations of individual NTE faculty members.

NTE salaries should be established as a living wage, tied to appropriate benchmarks. Departments may tie NTE salaries and benefits to benchmarks appropriate to departmental needs, such as P&S salaries, NTE impact on the revenue stream under the Resource Management Model, salaries and benefits at the University of Northern Iowa and/or the University of Iowa, or other relevant points of comparison based on recruiting and market needs.

In deciding departments’ faculty allocations, due consideration must be given to the need for equitable access of NTE and TTE to office arrangements and other department resources.

The Faculty Senate and Office of the Provost will monitor the effects on the NTE/TTE faculty mix of programmatic or across-the-board budget cuts. The Senate and Provost will work together to minimize the impact of departmental finances and protect Senior Lecturers, Senior Clinicians, Lecturers, and Clinicians from being unduly impacted.
## Task Force to Examine Nontenure Teaching Percentage

The following is intended to outline the status of the Department of ______________ regarding teaching in the Department by non-tenure-eligible (NTE) faculty. It is assumed that this statement remains in effect for three years, after which the statement will be re-evaluated as needed. Information related to the time period for re-evaluation, procedures by which a statement may be modified, and methods through which the typical distribution of responsibility may be changed are included in the Governance Document of the Department of ______________ and the College of __________________________.

Starting with Fiscal Year 2010/2011 and for the two succeeding Fiscal Years (not including Summer Session), the Department of ______________ establishes XX% as its target for the maximum percentage of all student credit hours (SCH) offered by the Department that will be instructed by NTE teaching effort. The justification for this target is outlined in the attached memo.

A written explanation will be submitted to the Dean of the College of __________________ by the Department Chair to justify exceptions to this target. NTE decisions related to this target will be made cooperatively by Department faculty in coordination with the Department Chair and in accordance with provisions of the Department’s and College’s Governance Document.

This target for the proposed maximum contribution by Department of ______________ NTE faculty to instructional SCH will be monitored through data measuring the impact on the quality of teaching. The Dean will maintain adequate levels of funding to provide NTE support to the Department to meet its demonstrated need.

An appropriate Faculty Senate committee or council will review, at least once every 5 years, the terms for this Departmental Responsibility Statement and the NTE posture of each department and recommend appropriate remedial actions by the Office of the Provost.

Iowa State University Faculty Senate  
Task Force on Non-tenure-Track Appointments  
*As Approved by the Faculty Senate: 12/11/2001*

Committee Members: Christie Pope, Chair; Joanna Courteau; Dorothy Fowles; Neil Harl; Nolan Hartwig; Mack Shelley; Margaret Torrie; Tom Wheelock; Bill Woodman; Max Wortman.

**MOTION ON NON-TENURE-TRACK APPOINTMENTS**

**RATIONALE:** The commitment of Iowa State University to the tenure track system is based on the following principles:

- Tenure is critical to the mission of the university to provide information to society that is not compromised by extraneous pressures; non-tenure-track appointments, therefore, undermine the tenure system which is the foundation of academic freedom.
- Non-tenure-track appointments are often dollar-driven (for example, instructors are paid less to teach more; clinical appointments are expected to earn their salaries through fee income or chronic underfunding of base).
- Quality can be jeopardized, because such appointments are frequently selected from a less competitive pool.
- Large numbers of non-tenure-track appointments providing instruction signals society that teaching is not a top priority with the institution, contradicting one of the basic missions of Iowa State University.
- Continuing non-tenure-track appointments create second-class citizens in the academy.
- Non-tenure-track appointments seldom are the result of national searches and therefore are unfair to qualified persons seeking such positions who are unaware of openings.
- The use of temporary teaching appointments disrupts curricular continuity.
- Large numbers of non-tenure-track appointments increase the burden of tenure-track faculty.

**MOTION:**

Therefore be it resolved that the Faculty Senate reaffirm the imperative of the tenure system by urging that the University maintain its long-term commitment to teaching, research, and extension being conducted by tenured and tenure-track faculty.

Further, pursuant to this policy the parameters for the employment of teaching faculty that are not part of the tenure system shall be as follows:
1) Tenure-line faculty shall be responsible for selecting, reviewing, and renewing non-tenure-track faculty appointments, consistent with the principles of shared governance, and in accordance with each unit’s governance document. This purview includes personnel carrying out instructional duties providing course credit.

2) Short-term non-tenure-track teaching shall be limited to opportunities for utilizing outstanding master scholars and practitioners or to unanticipated pressures like funding shortages or unforeseen enrollment increases. Positions shall not be considered temporary when they are filled from year to year.

3) ISU subscribes to AAUP guidelines and standards for part-time and non-tenure-track faculty, in effect as of 10/09/01, including the AAUP recommendation that part-time and non-tenure-track faculty appointments be limited to no more than 15 percent of the total instruction within the university, and no more than 25 percent of the total instruction within any given department.

4) Non-tenure-track faculty appointments should have equitable compensation and access to professional development opportunities.

5) Non-tenure-track faculty will be included in the departmental and institutional structures of faculty governance. Individuals who are degree candidates from ISU and teach as a part of their educational experience will not be given faculty rank nor counted as non-tenure-track faculty.

6) No changes shall be made unless requested to the status, title, and privileges of persons already holding continuing non-tenure-track faculty positions.

7) Non-tenure-track faculty positions are term appointments eligible for renewal based upon the quality of performance, the continuing need of the unit, and are subject to approval by the Dean and Provost. Individuals appointed to these positions will be evaluated for compensation and advancement using established criteria appropriate to their positions. Evaluations for renewal of appointment will be conducted by an appropriate faculty committee and recommended by the DEO.

In addition to adjunct faculty, the Faculty Senate recommends to the administration that the following non-tenure-track faculty positions be considered for use at ISU:

- Lecturer and Clinician: a limited term full- or part-time appointment of from one semester to three years and renewable for no more than a total of six years.

- Senior Lecturer and Senior Clinician: a limited term full or part time appointment not to exceed five years, requiring a notice of one year of intent not to renew. To be eligible for appointment as Senior Lecturer or Senior Clinician the individual shall have served as a Lecturer or Clinician or its equivalent for six years.

8) The Faculty Senate shall exercise oversight of compliance with these recommendations and will accept and review applications for exceptions to appointment limitations in number 3 from the Provost, consistent with shared governance.
Dear Mack Shelley,

Your message concerning AAUP guidelines on contingent faculty appointments reached my desk in the Association’s Department of Academic Freedom, Tenure, and Governance, and I am pleased to respond.

With respect to Association-supported standards for contingent appointments, our 2003 statement *Contingent Appointments and the Academic Profession* (attached at your request) provides, ”[r]ecognizing that current patterns of faculty appointment depart substantially from the ideal, the Association affirms its 1980 and 1993 recommendations that no more than 15 percent of the total instruction within an institution, and no more than 25 percent of the total instruction within any department, should be provided by faculty with non-tenure-track appointments.” The statement continues:

"For the long-term good of institutions and their students, the use of non-tenure-track appointments should be limited to specialized fields and emergency situations. Faculty who hold such special and emergency appointments should have the protections of academic freedom, due process, and fair compensation as described above. Special appointments refer, for example, to sabbatical replacements,
substitutes for leaves of absence, or limited artist-in-residence appointments. Special appointments should not exceed a small percentage of all faculty appointments, and the Associations allowance for special appointments should not be construed as an endorsement of the thousands of full-time non-tenure-track faculty appointments that now comprise over 30 percent of all full-time faculty positions.”

While the limits within which Iowa State has been operating appear to be within Association-recommended standards, I also commend to your attention the series of steps provided in the attached statement for improving the conditions of faculty work, and for reducing your institution’s reliance on contingent faculty.

If I can be of further assistance, don’t hesitate to give me a call.

Sincerely,
Anita Levy

Subject: NTE guidelines

I am chairing a Faculty Senate task force at Iowa State University on Non-Tenure-Eligible faculty.

We are not certain about the status of AAUP limits on (or guidelines for) the percentage of NTE faculty role in instruction.
We have been operating with limits of 15% NTE overall for the institution and 25% for a department.
Could you please advise whether those limits reflect current AAUP practice? Also, would it be possible to provide an online or print reference for current policy?

Thank you very much.

Contingent Appointments and the Academic Profession

The statement that follows was prepared by a joint subcommittee of the Association’s Committee on Contingent Faculty and the Profession (formerly the Committee on Part-time and Non-Tenure-Track Appointments) and Committee A on Academic Freedom and Tenure and adopted by the Association’s Council in November 2003.

Ten years ago, the Association addressed the conditions and status of part-time and non-tenure-track faculty in a thoroughly documented report. Since that time, faculty work has become more fragmented, unsupported, and destabilized. Faculty members are now classified in a growing number of categories with new titles and with distinct responsibilities, rights, and privileges.

The proportion of faculty who are appointed each year to tenure-line positions is declining at an alarming rate. Because faculty tenure is the only secure protection for academic freedom in teaching, research, and service, the declining percentage of tenured faculty means that academic freedom is increasingly at risk. Academic freedom is a fundamental characteristic of higher education, necessary to preserve an independent forum for free inquiry and expression, and essential to the mission of higher education to serve the common good. This report examines the costs to academic freedom incurred by the current trend toward overreliance on part- and full-time non-tenure-track faculty.

A common thread runs through earlier statements and reports on the topic of part-time and non-tenure-track appointments. Some of these statements, which were adopted by the Association’s committees and Council over the last three decades, are described in an addendum following this report. They acknowledge the economic and managerial pressures that have been presented—in good economic times and bad—as justification for a constantly increasing reliance on part- and full-time non-tenure-track appointments. But they also clearly articulate the dangers to the quality of American higher education that are inherent in this trend.

Consistent with the Association’s earlier statements, this report and its recommendations proceed from the premise that faculty in higher education must have academic freedom protected by academic due process. It emphasizes the importance of preserving for all faculty the integrity of the profession, founded on the interaction of research, teaching, and service, and it offers recommendations for institutions and academic departments that are undertaking to restabilize their faculties by increasing the proportion of full-time tenure-line appointments.

While this statement emphasizes the necessity of correcting the growing dependence on contingent faculty appointments, the Association recognizes the significant contrast between current practices and the recommendations on faculty work offered here as necessary for the well-being of the profession and the public good. Therefore, the statement both offers guidelines by which institutions and faculties can plan and implement gradual transitions to a higher proportion of tenurable positions and, at the same time, affirms the development of intermediate, ameliorative measures by which the academic freedom and professional integration of faculty currently appointed to contingent positions can be enhanced by academic due process and assurances of continued employment.

Definition of Contingent Faculty

The term “contingent faculty” includes both part- and full-time faculty who are appointed off the tenure track. The term calls attention to the tenuous relationship between academic institutions and the part- and full-time non-tenure-track faculty members who teach in them. For example, teachers hired to teach one or two courses for a semester, experts or practitioners who are brought in to share their field experience, and whole departments of full-time non-tenure-track English composition instructors are all “contingent faculty.” The term includes adjuncts, who are generally compensated on a per-course or hourly basis, as well as full-time non-tenure-track faculty who receive a salary.

For purposes of a policy discussion, these faculty cannot be separated neatly into two groups—part-time and full-time—based on the number of hours they work. Some faculty members are classified by their institutions as “part time,” even though they teach four or five courses per term. Whether these faculty members teach one class or five, the common characteristic among them is that their institutions make little or no long-term commitment to them or to their academic work. The fact that many non-tenure-track faculty are personally committed to academic careers, even while putting together a patchwork of teaching opportunities in one or more institutions in order to sustain themselves, has become all but irrelevant in institutional practice.

A small percentage of part-time faculty bring the benefit of expertise in a narrow specialty to add depth or specificity to the course offerings otherwise available at an institution. Another small percentage are practitioners of a profession such as law, architecture, or business and bring their direct experience into the classroom in a class or two each week. While many individuals with such appointments may find the conditions of part-time academic employment acceptable, their situation...
is the exception rather than the norm, and therefore should not serve as the primary model for a policy discussion. The vast majority of non-tenure-track faculty, part and full time, do not have professional careers outside of academe, and most teach basic core courses rather than narrow specialities.

Graduate students who teach classes fall along a spectrum. At one end is the student who teaches a reasonable number of classes as part of his or her graduate education. At the other end is the person who teaches independently, perhaps for many years, but not in a probationary appointment, while he or she completes a dissertation. To the extent that a person functions in the former group, as a graduate student, his or her teaching load should be carefully structured to further—not frustrate—the completion of his or her formal education. To the extent that a person functions in the latter group, undertaking independent teaching activities that are similar in nature to those of regular faculty, the term “contingent faculty” should apply. (For a more detailed discussion, see the AAUP’s Statement on Graduate Students.)

Postdoctoral fellowships, particularly in the humanities, are being used in new ways that, in effect, create a new employment tier prior to a tenure-track appointment. The concept of “contingent faculty” includes postdoctoral fellows who are employed off the tenure track for periods of time beyond what could reasonably be considered the extension and completion of their professional training. Institutions’ increased reliance on postdocs to handle their teaching and research needs tends to delay the access of these individuals to appropriate security in the profession, and to create yet another requirement for new Ph.D.’s seeking tenure-line appointments, thereby undermining reasonable expectations of long-term institutional commitments to new faculty.

**Nontenured Majority**

At most universities and colleges, the number of tenure-track positions now available is insufficient to meet institutional teaching and research needs. To staff essential courses, most institutions hire both part- and full-time faculty off the tenure track on short-term contracts and in other less formal arrangements.

Ten years ago, the Association reported that non-tenure-track appointments accounted for about 58 percent of all faculty positions in American higher education. As of 1998, such appointments still accounted for nearly three out of five faculty positions, in all types of institutions. In community colleges, more than three out of five positions are part-time non-tenure-track positions, and 35 percent of all full-time positions are off the tenure track. Non-tenure-track appointments make up an even larger proportion of new appointments. Through the 1990s, in all types of institutions, three out of four new faculty members were appointed to non-tenure-track positions.

The number of *full-time* non-tenure-track appointments is growing even faster than the number of *part-time* non-tenure-track appointments. Full-time appointments off the tenure track were almost unknown a generation ago; in 1969, they amounted to 3.3 percent of all full-time faculty positions. But between 1992 and 1998, the number of full-time non-tenure-track faculty increased by 22.7 percent, from 128,371 to 157,470. During that same period, the number of part-time non-tenure-track faculty increased by only 9.4 percent, from 360,087 to 393,971, and the number of full-time tenure-line faculty increased by less than 1 percent. By 1998, full-time non-tenure-track faculty comprised 28.1 percent of all full-time faculty and 16 percent of all faculty. Part-time non-tenure-track faculty comprised 95 percent of all part-time faculty, and 40 percent of all faculty.

“Non-regular” appointments, including both part-time faculty and the rapidly growing group of full-time non-tenure-track faculty, have become the norm. These appointments require only minimal commitment from the institution, and they result in a predictably high level of faculty turnover. Most non-tenure-track appointments are very brief in duration, lasting for only one or two terms. Only a quarter of all part-time faculty appointments extend beyond two terms. Full-time non-tenure-track faculty serve most frequently in one-year appointments.

Women are more strongly represented among part-time faculty than among full-time faculty. As of 1998, 48 percent of all part-time faculty were female, while only 36 percent of all full-time faculty were female. Women who do hold full-time positions are more strongly represented among lecturer and instructor positions, with little opportunity for tenure. As of 2000, women made up 55 percent of lecturers, 58 percent of instructors, 46 percent of assistant professors, 36 percent of associate professors, and only 21 percent of full professors. Although the participation of women in the academic profession is increasing overall, the increase comes at a time when opportunities for full-time tenured positions are declining.

The minimal institutional commitment and relatively rapid turnover that characterize appointments of part- and full-time contingent faculty mean that few faculty members are available for long-term institutional and curricular planning, for mentoring newer faculty, and for other collegial responsibilities such as peer reviews of scholarship and evaluations for reappointment and tenure. The faculty as a whole is less stable when its members are increasingly unable to support these key academic activities.

**Diminishing Investment in Education**

The diminishing level of institutional commitment to stable, full-time, tenured faculty might suggest that higher education is a fading value in our society—that perhaps there are fewer students, flagging interest in completing degrees, and lower enrollment in graduate studies. In fact, the opposite is true. Between 1976 and 1999, student
enrollment in degree granting institutions grew by 34 percent. During that time, the number of bachelor’s degrees conferred increased by 31 percent, master’s degrees by 41 percent, and doctoral degrees by 35 percent. But instead of increasing proportionately the number of full-time tenured and tenure-track faculty positions needed to teach these students and mentor these graduates, since 1976 institutions have increased the number of part-time faculty by 119 percent and the number of full-time non-tenure-track faculty by 31 percent. Most of these contingent faculty members teach undergraduates.

During part of this period of rapid enrollment growth, colleges and universities, especially public institutions, experienced serious budgetary pressures. In 1980, state governments supported almost a third (31 percent) of the cost of higher education in public institutions, with the rest of the higher education budget depending on tuition and fees (21 percent), federal appropriations (15 percent), sales and services (21 percent), gifts and endowments (7 percent), and other sources, including local governments. By 1996, the burden had shifted considerably, with state budgets offering just 23 percent of the necessary support. The federal government also reduced its share of support, to 12 percent, and income from other sources stayed about the same. This left tuition and fees as the sole source for 28 percent of the revenue. Recent budget constraints in nearly every state have further strained the support of public institutions.

As budgets tightened and tuition and fees increased through the 1980s and 1990s, institutions set new priorities. But even with substantial increases in student enrollments, many institutions chose to allocate proportionately less to their instructional budgets, and instead to increase spending on physical plant, new technologies and technology upgrades, and administrative costs. In 1998, the congressionally appointed National Commission on the Cost of Higher Education confirmed that investments in faculty had decreased in recent years, even as tuitions rose. In their testimony and comments to the commission, representatives of public and private institutions described pressures to compete for students by investing heavily in recreational facilities, updated dormitories, and the latest computer technologies. Institutions made up for these heavy expenditures by reducing instructional budgets, which they accomplished by hiring more contingent faculty instead of making a commitment to tenure line faculty. While this choice may have improved the infrastructure on many campuses, it has undoubtedly imposed a cost on the quality of instruction. Though incoming students may find finer facilities, they are also likely to find fewer full-time faculty with adequate time, professional support, and resources available for their instruction.

Costs of Increased Contingency
The dramatic increase in the number and proportion of contingent faculty in the last ten years has created systemic problems for higher education. Student learning is diminished by reduced contact with tenured faculty members, whose expertise in their field and effectiveness as teachers have been validated by peer review and to whom the institution has made a long-term commitment. Faculty governance is weakened by constant turnover and, on many campuses, by the exclusion of contingent faculty from governance activities. Inequities and physical distance among potential colleagues undermine the collegial atmosphere of academic institutions and hamper the effectiveness of academic decision making. The integrity of faculty work is threatened as parts of the whole are divided and assigned piecemeal to instructors, lecturers, graduate students, specialists, researchers, and even administrators. Academic freedom is weakened when a majority of the faculty cannot rely on the protections of tenure. The following paragraphs examine each of these problems as an educational cost that institutions incur when they choose not to invest adequately in their instructional missions.

Quality of Student Learning
Most educators agree that maintaining the quality of student learning is a major challenge for higher education. Recent studies have identified informal interactions with faculty outside the classroom, which “positively influence persistence, college graduation, and graduate school enrollments” of students, as one of the strongest positive factors contributing to student learning. Unfortunately, part-time faculty members, who are typically paid by the course, are discouraged by their employment arrangements from spending time outside of class with students or on student-related activities, whether in office hours and less formal interactions or in class preparation and grading papers. In addition, the practice of paying very low wages to adjuncts pressures many to support themselves by seeking multiple course assignments on multiple campuses, thus further limiting their opportunities to interact with students. Full-time faculty generally spend 50 to 100 percent more time per credit hour on instruction, in and out of the classroom, than do part-time faculty. However, as a diminishing number of full-time tenured and tenure-track faculty must take on additional institutional responsibilities that are not typically shared with contingent faculty, including faculty governance and institutional support of various kinds, tenure track faculty may find that they are also pressed for time to spend with students outside of class. Students clearly bear the direct impact of reductions in institutional instructional budgets. The Association’s 1986 statement On Fulltime Non-Tenure-Track Appointments cautions:
We question whether the intellectual mission of a college or university is well served when the institution asserts that certain basic courses are indispensable for a liberal education but then assigns responsibility for those courses to faculty members who are deemed replaceable and unnecessary to the institution. Indeed, we believe that an institution reveals a certain indifference to its academic mission when it removes much of the basic teaching in required core courses from the purview of the regular professoriate.

Because of increased reliance on contingent faculty, students entering college now are less likely than those of previous generations to interact with tenured or tenure-track professors who, in turn, are fully engaged in their respective academic disciplines. It is the professional involvement of faculty in academic disciplines that ensures the quality, currency, and depth of the content being offered to students. But now, because of the time constraints imposed on contingent faculty, especially part-time faculty, teachers of undergraduate courses are less likely to be informed about the latest developments in an academic discipline and to be challenged by recent research and writing. It is difficult for part-time faculty to be flexible and responsive to students’ interests and abilities when they lack class preparation time and are required to deliver courses according to a predetermined curriculum. Contingent faculty, especially part-time faculty, are less likely than their tenure line colleagues to have professional support such as office space, personal computers, and professional development opportunities. Because they lack resources and compensated time, contingent faculty may not be able to assign and supervise complex and meaningful projects. Students of contingent faculty may have diminished opportunity to reach beyond the limits of the course outline and the classroom, with their instructor’s support, to encounter a passion for scholarship and freedom of inquiry. Moreover, the heavy use of contingent faculty in fundamental first- and second-year undergraduate courses tends to separate tenure track faculty from the introductory teaching that is critical to their understanding of the student body and of the basic questions that new students ask about their disciplines. This reduced contact with undergraduate students makes it more difficult for tenure track faculty to sustain the cohesion and effectiveness of the curriculum. Finally, as the Association’s 1993 statement The Status of Non-Tenure-Track Faculty points out, faculty with non-tenure-track appointments “serve with their academic freedom in continuous jeopardy.” It is therefore not surprising, the statement notes, that “the more cautious among them are likely to avoid controversy in their classrooms” and thus to deprive their students of that quintessential college experience.

**EQUITY AMONG ACADEMIC COLLEAGUES**

Inequities begin in the appointment process. Appointments of full-time tenure-track faculty typically follow rigorous national searches, which include a review of the candidate’s scholarly record, an assessment of teaching potential, and consideration of other attributes by faculty in the department offering the appointment. Contingent faculty, by contrast, are often appointed in hurried circumstances. Department chairs select likely candidates from a local list, reviewing their curricula vitae and perhaps their past student evaluations. Faculty in most contingent positions are rarely reviewed and evaluated during their appointments, and little care is taken to enhance their professional development and advancement. In many institutions, evaluations are the responsibility of the busy dean or chair who appointed the individual, and may be neglected unless complaints or problems arise. By contrast, in other institutions, contingent faculty are constantly evaluated, sometimes by faculty members with much less experience, or even by graduate students.

Economic differences provide an even sharper contrast between part-time contingent faculty and tenured faculty. While part-time faculty who teach in professional and vocational schools or programs are likely to hold full-time positions outside the academy, those who teach in core liberal arts fields such as English, foreign languages, history, and mathematics are more likely to rely on their teaching for their livelihood. This means that a sizeable corps of college teachers lacks access to employment benefits, including health insurance and retirement plans. To support themselves, part-time faculty often must teach their courses as piecework, commuting between institutions, preparing for courses on a grueling timetable, striving to create and evaluate appropriately challenging assignments, and making enormous sacrifices to maintain interaction with their students. A large gap in working conditions exists even between the most experienced part-time faculty members and newly appointed tenure-track faculty members.

Contingent faculty, both part- and full-time, are constantly confronted with reminders of their lack of status in the academic community. The isolation of contingent faculty from opportunities to interact with their tenured or tenure track colleagues and to participate in faculty governance, professional development, and scholarly pursuits promotes divisions and distinctions that undermine the collegial nature of the academic community. Taken together, these inequities weaken the whole profession and diminish its capacity to serve the public good.

**INTEGRITY OF FACULTY WORK**

Higher education achieves its unique standing in our society because it is characterized by original research, teaching that is grounded in scholarly disciplines, and service to the larger community, all supported and protected by academic freedom. Institutions rely on the professional responsibility of the faculty to maintain a strong commitment
to student learning and to the development of scholarship. Indeed, the Association’s founding statement, the 1915 Declaration of Principles on Academic Freedom and Academic Tenure, describes the public purposes of a college or university as teaching, scholarship, and service. The relative emphasis placed on teaching, scholarship, and service by a faculty member varies according to the terms of his or her appointment and academic discipline and the type of institution at which he or she works. But although emphases vary, these functions are not completely divisible. Faculty work cannot be sliced cleanly into component parts without losing the important connections that make up the whole. For example, while teaching may be the primary mission of certain types of institutions or programs, teaching faculty recognize the need to engage in scholarly work in order to remain current and effective as teachers in their respective disciplines. Similarly, research universities support original research, but research faculty typically share new information and insights with the university community by teaching in a graduate program and by consulting with academic colleagues. In all types of institutions, faculty share a responsibility for academic decision making. Faculty participation in governance structures is an essential feature of higher education, ensuring that programs and courses are of high quality and are academic in nature.

ACADEMIC FREEDOM

Academic freedom in colleges and universities is essential to the common good of a free society. Academic freedom rests on a solid base of peer review and as such is the responsibility of the entire profession. The profession protects academic freedom through a system of peer review that results in institutional commitment to faculty members. Faculty peers make careful judgments in the appointment process, conduct ongoing reviews that may lead to reappointments, and make evaluations that may determine the completion of the probationary period and the beginning of continuous tenure. Individual faculty members can exercise their professional inquiry and judgment freely because peer review affirms their competence and accomplishments in their fields.

By contrast, the attenuated relationship between the contingent faculty member and his or her department or institution can chill the climate for academic freedom. Currently, neither peer review nor academic due process operates adequately to secure academic freedom for most contingent faculty members. The lack of adequate protection for academic freedom can have visible results. Contingent faculty may be less likely to take risks in the classroom or in scholarly and service work. The free exchange of ideas may be hampered by the specter of potential dismissal or nonrenewal for unpopular utterances. In this chilling atmosphere, students may be deprived of the robust debate essential to citizenship. They may be deprived of rigorous and honest evaluations of their work. Likewise, faculty may be discouraged from explorations of new knowledge and experimentation with new pedagogies. Perhaps most important, institutions may lose the opportunity to receive constructive criticism of
academic policies and practices from a significant portion of the academic community.

To secure academic freedom for the entire profession, and to ensure the highest quality in teaching and research, the responsibilities of faculty peers in the appointment and evaluation of colleagues for contingent faculty positions should resemble those for appointments on the tenure track. Faculty members appointed and reappointed to contingent positions should receive conscientious and thorough peer reviews in which they can demonstrate their effectiveness; their successive reappointments would then validate their record of competence and accomplishments in their respective fields.

Resting securely on a base of peer review, academic freedom is best guaranteed by tenure and academic due process. We here affirm longstanding Association policy that, with carefully circumscribed exceptions, all full-time appointments are of two kinds: probationary appointments and appointments with continuous tenure. According to the joint 1940 Statement of Principles on Academic Freedom and Tenure, “[a]fter the expiration of a probationary period, teachers or investigators should have permanent or continuous tenure, and their services should be terminated only for adequate cause . . . or under extraordinary circumstances because of financial exigencies.” For full-time faculty the probationary period should not exceed seven years, and those who are reappointed beyond seven years should be recognized as having the protections that would accrue with tenure—termination only for adequate cause and with due process.

To protect academic freedom and to ensure the highest quality in college and university education, colleges and universities need the stability of a tenured faculty. The Association’s 1993 report The Status of Non-Tenure-Track Faculty urges: "Whenever possible, the regular academic instruction of students should be the responsibility of faculty members who are responsible for the curriculum and participate in the governance of the institution, and to whom the institution is willing to make the commitment of tenure.” Where the ideal is not immediately reachable, faculties and administrations should both adopt concrete plans to increase the proportion of positions that are protected by tenure, and in the interim develop and implement practical safeguards for academic freedom for all faculty, and assurances of conscientious peer review and continued employment of well-qualified faculty, in order to maintain the quality of the education offered at the institution. This transitional phase should include at least these three elements:

1. Part- and fulltime contingent faculty should be provided opportunities to move into tenured positions (part or full time), the requirements for which should be defined, as always, by faculty peers.
2. Part-time faculty, after a reasonable opportunity for successive reviews and reappointments, should have assurances of continued employment. (For examples of measures that provide such assurances, see the recommendations on tenure and academic due process in the following section of this report and the 1979 summary, Academic Freedom and Due Process for Faculty Members Who Serve Less Than Full Time, which is included in “Previous Reports on Contingent Faculty,” at the end of this report.)
3. Faculty and administrators should exercise great care in recruiting and appointing new faculty, for any position, to ensure that new faculty may have some prospect of eventually achieving tenure.

Finally, it is important to note that tenure can be granted at any professional rank (or without rank); the Association does not link tenure with a particular faculty status. The professor in a research university, whose appointment includes a significant responsibility for original research, should not be the sole or primary model for tenurable academic work. A faculty member whose position focuses primarily on teaching, supported by sufficient opportunity for scholarship and service, is also engaged in tenurable academic work. Just as there are different emphases in the range of faculty appointments in research universities, comprehensive universities, liberal arts colleges, and community colleges, all of which define tenurable faculty work, so, too, there may be different models for tenurable faculty work within a single institution.

Recommendations on Faculty Work
The work of faculty comprises an integrated whole; segmenting that work threatens the quality of higher education, undermines the reliability and effectiveness of academic decision making, undercuts the necessary protections of academic freedom, and imposes an unacceptable cost on student learning. The increased reliance of the academy on faculty whose academic freedom is not protected diminishes the professional autonomy and the intellectual independence of all faculty—essential elements of the mission of higher education. Knowing from long experience that academic freedom thrives in a relationship of commitment and responsibility between faculty and their institutions, the Association makes the following recommendations.

Faculty Work as an Integrated Whole
Faculty appointments, part- or full-time, should be structured to involve, at least to some extent, the full range of faculty responsibilities, including teaching activities both in and outside the classroom, scholarly pursuits such as contributions to an academic discipline or maintenance of professional currency, and service that ensures that academic decisions are well informed by the experience and expertise of all faculty and that the wider community
shares in the benefits of the knowledge fostered by the university community.

**Peer Review**
Collegial support of academic freedom for the profession requires conscientious and thorough reviews of the work of all faculty members, including contingent faculty. Reviews should be conducted by faculty peers and should be structured to permit faculty members to demonstrate their competence and accomplishments in their respective fields. The records of reviews should validate faculty members’ effectiveness in their positions. Appointment, review, and reappointment processes should incorporate accepted practices of academic due process, and should give careful attention to the quality of education that the faculty member contributes to the institution.

**Tenure and Academic Due Process**
Teaching, scholarship, and service must be protected by academic freedom and due process. For faculty with full-time appointments, academic freedom must be protected by tenure following a reasonable probationary period. For faculty with full-time appointments, regardless of their titles, the probationary period should not exceed seven years. In addition, all part-time faculty, after appropriate successive reviews for reappointments, should have assurance of continuing employment. Such assurance can be provided through a variety of measures, some of which were recommended by the Association in 1993. Examples include longer terms of appointment, opportunities for advancement through ranks, due process protections (described below), recognition of seniority (such as first opportunities for reappointment and course selection), conscientious peer evaluation, earlier notices of reappointment, and opportunities to appeal nonreappointment.

The Association affirms as partial protections of academic freedom for part-time faculty the following specific due process provisions set forth in 1979: written terms and conditions of appointments, modifications, and extensions; a written statement of reasons and an opportunity to be heard before a duly constituted committee prior to involuntary termination during a period of appointment; access to a duly elected faculty grievance committee; and a statement of reasons and a hearing before a duly constituted faculty committee for nonreappointment, if the faculty member makes a prima facie case of an academic freedom violation or improper discrimination.

**Shared Governance**
Curricular and other academic decisions benefit from the participation of all faculty, especially those who teach core courses. Governance responsibilities should be shared among all faculty at an institution, including those appointed to less-than-full-time positions. Although part-time faculty have proportionately less time available for governance responsibilities, their appointments should provide for appropriate participation and compensation. Faculty and administrators in each institution, program, or department should together determine the appropriate modes and levels of participation in governance for part-time faculty, considering issues such as voting rights, representation, and inclusion in committees and governance bodies, with the primary aim of obtaining the best wisdom and cooperation of all colleagues in the governance of their institutions. Participation in shared governance requires vigilant support of academic freedom and the protections of due process. In order to protect the right and the responsibility of nontenured as well as tenured faculty to participate freely and effectively in faculty governance, it is incumbent on all faculty to protect the exercise of academic freedom by their colleagues in faculty governance processes.

**Compensation**
All faculty work should be compensated fairly. Positions that require comparable work, responsibilities, and qualifications should be comparably compensated, taking into account variations by discipline, seniority, and departmental priorities. As the Association recommended in 1993, compensation for part-time appointments, including those in which faculty are currently paid on a per-course or per-hour basis, should be the applicable fraction of the compensation (including benefits) for a comparable full-time position. Although the variety of responsibilities and qualifications required of each position may make comparability difficult to determine, it is the responsibility of duly constituted faculty bodies to meet this challenge.

**Limitations of Contingent Appointments**
Recognizing that current patterns of faculty appointment depart substantially from the ideal, the Association affirms its 1980 and 1993 recommendations that no more than 15 percent of the total instruction within an institution, and no more than 25 percent of the total instruction within any department, should be provided by faculty with non-tenure-track appointments.

For the long-term good of institutions and their students, the use of non-tenure-track appointments should be limited to specialized fields and emergency situations. Faculty who hold such special and emergency appointments should have the protections of academic freedom, due process, and fair compensation as described
above. Special appointments refer, for example, to sabbatical replacements, substitutes for leaves of absence, or limited "artist-in-residence" appointments. Special appointments should not exceed a small percentage of all faculty appointments, and the Association’s allowance for special appointments should not be construed as an endorsement of the thousands of full-time non-tenure-track faculty appointments that now comprise over 30 percent of all full-time faculty positions.

**FLEXIBLE SCHEDULING**

Within the context of tenure, a certain amount of flexibility in scheduling is an appropriate response to the needs of faculty at various career stages. The Association affirms the recommendation made in the 1987 statement *Senior Appointments with Reduced Loads* for opportunities “for faculty member[s] to move from a full to a reduced load and back to full-time status, depending on the needs of the individual and the institution.” Modified appointments—possibly with reduced workloads and salary, but without loss in status—might serve faculty members at various stages of life or career. The Association’s 2001 *Statement of Principles on Family Responsibilities and Academic Work* recommends, among other accommodations for faculty who are new parents, adjustments in the probationary period at the request of the faculty member.

These recommendations speak to all faculty—tenured, tenure-track, and contingent. They urge a renewal of the conception of faculty work as an integrated whole that fits with and supports the mission of higher education for the public good. They urge an integration of principles of academic freedom and due process in the work of all faculty, and recommend inclusion of all faculty in the academic work of the institution. The Association recognizes the gap between these recommendations and current practices. This gap must be bridged in two ways:

1. by developing concrete mechanisms to integrate contingent faculty into the academic work of their institutions and to protect the academic freedom of faculty currently appointed to contingent positions, and
2. by increasing the proportion of positions protected by tenure. We offer below some practical guidelines for transitions to an improved ratio of tenured faculty. Each plan for transition, of course, must be customized to a particular institution, as developed by administrations and all faculty working together collegially.

**Transition from Current to Best Practices**

Transitions happen gradually. The professoriate’s transition from a body composed mainly of full-time tenure line faculty to a body composed mainly of contingent faculty occurred over several decades. Now, some institutions seek to recover the stability and quality of instruction lost in that transition. Some simply seek to improve the ratio of tenure line faculty in one or more departments. Such changes do not have to be precipitate and jarring to institutions, to students, or to faculty members who were appointed on a contingent basis and have, nonetheless, tried to build an academic career. Both faculty and administrators participated in the decisions that have resulted in heavy reliance on contingent faculty, especially for undergraduate teaching. Both faculty and administrators now share the responsibility for reducing such reliance while minimizing the costs of change to current contingent faculty.

A transition to a stable, mostly tenured or tenure-eligible faculty can be accomplished by relying primarily on attrition, retirements, and the appointment of more faculty to meet the needs of the increasing number of students expected in coming decades. Plans for conversion should be addressed by duly constituted faculty bodies that invite the participation of contingent faculty.

Instructional budgets, of necessity, compete for funds with other college and university priorities. Students, alumni, parents, and local legislators may be among the first to recognize the value of investments that strengthen the quality of undergraduate education and may assist in identifying the resources necessary for a transition.

For example, in 2001, the California legislature passed a resolution to increase the percentage of tenured and tenure-track faculty in the California State University system to 75 percent over an eight-year period. A systemwide working group adopted a plan that outlined a goal of improving the ratio of tenured and tenure-track faculty by 1.5 percent each year. The plan anticipated that many faculty holding non-tenure-track lecturer positions would apply successfully for newly created tenure-track positions, and that the remaining replacements of lecturer positions with tenure-track positions could be handled through attrition and retirements of lecturers. To meet the goal, the state undertook to conduct between 1,800 and 2,000 annual searches for new tenure-track faculty. The cost of recruiting, appointing, and compensating the new positions was estimated to be between $4.8 and $35 million in each of the eight years, which reflected an increase of 0.18 percent to 1.3 percent in the systemwide budget.

At Western Michigan University, the faculty successfully bargained for a contract that offered tenurable positions to a group of “faculty specialists” including health specialists and teachers in the College of Aviation. Because the faculty union and the institution had moved incrementally toward this step, first regularizing the positions by adopting position descriptions and promotional ranks and agreeing on some due process provisions, and then offering job security with four-year reviews, the cost of the transition to the tenure track was negligible.

These two examples demonstrate that institutions committed to high-quality undergraduate education can plan
appropriate steps to reduce their reliance on temporary faculty.

Preparation for a Transition
We make the following recommendations for systems, institutions, departments, or programs preparing to make a transition from an unstable academic environment characterized by overreliance on contingent faculty appointments to a stable academic environment characterized by a predominantly tenure-line faculty.

Assess the current situation. How many faculty members in each department are currently appointed off the tenure track? How many of such appointments are needed to serve the long-term best interests of the students and the institution? The current ratio of contingent faculty to tenured and tenure-track faculty should serve as a benchmark. As a transition begins, the institution or department should seek to reduce that ratio.

Define and describe the goal. Faculty and administrators should consider the end result sought. Different profiles of tenurable positions, with varied emphases given to teaching, research, and service as integral parts of faculty work, might suit the mission and work of different departments, programs, or institutions. Each department, program, or institution should consider which profiles best fit its long-term needs. For example, the work of some tenured faculty, particularly at the undergraduate level, may emphasize teaching or service, while the work of others may emphasize research and graduate education. Some faculty may be eligible for tenure as specialists, as clinical instructors, or in other positions that vary from conventional faculty ranks of assistant, associate, and full professor.

To determine the number of tenured positions needed for each department, program, or institution, faculty and administrators should begin with the premise that core and advanced courses should be taught by faculty who have the protection of academic freedom, secured by tenure and academic due process, as well as the ability to participate fully in their profession and in the collegial environment of the academy. Duly constituted faculty bodies should determine the full complement of tenured and tenure-track faculty needed in a department, program, or institution. The number of tenure lines in the budget of an institution or statewide system should reflect at least the number of faculty needed to teach the students enrolled in core and advanced courses offered on a continuing basis. Budget constraints and other concerns may prevent the immediate realization of a full complement of tenured faculty. Nevertheless, the goal should be defined.

Consider appropriate criteria for tenure. A duly constituted body of faculty peers should determine tenure qualifications and requirements for each type of appointment. When a position is made “tenurable,” the relative emphasis on teaching, scholarship, and service necessary for that position, and therefore the qualifications that should be emphasized in tenure criteria for that position, may vary among departments and programs and among types of appointments.

Stabilize the situation. Having made a commitment to reduce reliance on a contingent teaching force, institutions should avoid appointing new contingent faculty during the transition. New contingent appointments, if any, should be limited to candidates whose qualifications, after a probationary period, are likely to meet the institution’s standards for tenure in the type of position being filled, in anticipation of eventual tenure eligibility. Such appointments should be made only in the context of a definite timetable, coupled with the commitment of appropriate resources, to convert the positions to tenure-track positions. Institutions should not rotate contingent faculty members through various types of appointments for the purpose of avoiding professional commitments to them.

Institutions should also avoid the proliferation of new types of contingent appointments and the proliferation of new names for existing types of appointments. Such proliferation increases the instability of the faculty and damages the careers of individual faculty members who are rotated through a variety of non-tenure-track positions.

Design a deliberate approach. Plans for a transition to a primarily tenured and tenure-track faculty should be structured to ensure the least possible disruption to student learning and faculty careers. A transition can be achieved through an incremental approach that relies in large part on the voluntary attrition of faculty holding contingent appointments. Contingent faculty, especially those who have been reappointed several times, should be included in faculty decision-making processes about the conversion of positions or the creation of new positions.

Faculty may determine that, during a period of transition, individuals currently holding teaching-only positions or other positions not presently recognized as tenurable may be “grandfathered” into tenured or tenurable positions. Based on their existing qualifications and consistently demonstrated effectiveness in their current work responsibilities, full-time non-tenure-track faculty who are reappointed for a period of time that is equivalent to the probationary period for tenure-track faculty should be recognized as being entitled, in their current positions, to the protections that would accrue with tenure. Part-time faculty whose effective academic service and accomplishments lead to successive reappointments should be accorded assurances of continued employment. (See the recommendations on tenure and academic due process, above.) When the “grandfathered” positions become vacant through attrition or retirement, new candidates can be recruited according to qualifications that faculty peers determine are necessary in the long term for the tenure-track positions.

When institutions create new tenurable positions in order to increase the proportion of tenured and tenure-track
faculty, part- and full-time contingent faculty who have experience, length of service, and a record of accomplishments should be welcomed as applicants for such new positions. Because some of these faculty may have been serving ably in similar positions for many years, faculty peers should design an appropriate probationary period for tenure that takes into account their individual qualifications and experience.

Recognize costs and plan for necessary resources. Just as overreliance on contingent faculty has long-term costs to students and institutions, transition to a full-time tenured and tenure-eligible faculty has immediate costs. These costs represent an appropriate investment, primarily in undergraduate education. They are offset somewhat by the diminished administrative expense of handling high turnover among faculty teaching essential courses, but nevertheless may be significant, especially in times of tight budgets.

Converting full-time non-tenure-track positions to tenurable positions represents the smallest increase in expenditures, as the compensation for full-time contingent faculty is only marginally less than for assistant professors overall. But, as noted earlier, full-time contingent faculty typically carry a heavier teaching load than assistant professors on the tenure track (50 percent heavier in research institutions, 15 percent heavier in other four-year institutions). To integrate these positions fully into the profession, these full-time teachers would need to be relieved of some teaching duties to allow time for scholarship and service, even if their positions continue to emphasize teaching as a primary activity. However, as is suggested by the examples of the California State University system and Western Michigan University, incremental budget increases may be sufficient to accommodate a conversion from contingency to stability.

Converting part-time positions to full-time tenurable positions presents a greater economic challenge. Part-time faculty are typically paid by the course, at roughly half the cost of full-time equivalent replacements. In addition, the institution typically incurs little or no financial liability for employment benefits for part-time faculty. The costs of a transition toward full-time tenure-track appointments can be spread out over time by such incremental steps as restructuring per-course appointments into fractional half-time or full-time appointments, with proportionate pay and benefits. Some part-time appointments, particularly of specialists and professional practitioners, may be appropriate to continue over a long term. In such cases, tenure eligibility for the part-time position, with proportionate compensation, should be considered.

Consistent with these recommendations, there are at least two ways to begin a transition from an unstable academic environment characterized by overreliance on contingent faculty appointments to a stable academic environment characterized by a predominantly tenure-line faculty. One option is for institutions to convert the tenure-eligible status of faculty members currently holding contingent appointments. Another option is for the institution to create new tenure-eligible positions, recruiting broadly for these positions and gradually phasing out contingent positions.

Conversion of Status
Faculty and administrators at an institution may consider changing the status of existing positions from nontenure track to tenure-line. The tenure-line positions can be either part- or full-time, depending on the needs of the department or program. When status is changed, the individuals holding the positions are offered a probationary period for tenure, and the following guidelines should be followed:
1 Faculty should consider the work to be undertaken by those holding newly converted positions. Formerly nontenure-track positions may need to be restructured or rearranged to allow the faculty members in such positions to assume the full range of faculty responsibilities, appropriate to the position, and to be compensated and recognized for those responsibilities.
2 The experience and accomplishments of faculty members who have served in contingent positions at the institution should be credited in determining the appropriate length and character of a probationary period for tenure in the converted position.
3 If the requirements of the position change when it becomes a tenure-line position, the faculty member in the position should be given time and appropriate professional-development support during a probationary period to enable him or her to meet the new requirements.

Creation of New Positions
Faculty and administrators at an institution may decide to create new tenure-track positions while reducing the number of new appointments of contingent faculty. When this is done, the following guidelines should be followed:
1 Faculty should reconsider the academic work to be undertaken by those holding both new and existing tenure-line positions. Faculty responsibilities may need to be restructured or rearranged in order to ensure that undergraduate as well as graduate courses are appropriately staffed.
2 When colleges and universities create new tenure-track positions, they should advertise widely to generate a diverse pool of applicants.
3 Experienced, effective, and qualified faculty members currently holding contingent appointments should be encouraged to apply for the new tenure-track positions. In the selection and appointment process, faculty and administrators should recognize the value of continuity in teaching and familiarity with the institution’s programs as desirable criteria. Contingent faculty members should be given fair and careful consideration when new tenure-eligible positions are created, and their experience and accomplishments should be taken into account. Certainly, faculty charged with the selection of new colleagues should scrupulously avoid discrimination against applicants currently employed in contingent positions. In the context of a transition, faculty members who have served many years in contingent appointments should have the option of continuing in the same position, with the same qualifications and responsibilities.

4 When institutions replace part-time positions with full-time positions, and/or contingent positions with tenure-track positions, they should create timetables that rely, insofar as possible, on attrition and voluntary terminations, in order to introduce the least possible disruption in the work lives of contingent faculty members who have served the institution well over a period of years.

5 Plans for transition should be multi-year plans, including a realistic assessment of the resources needed to accomplish the change, and the steps necessary to commit the appropriate resources.

Conclusion

The integrity of higher education rests on the integrity of the faculty profession. To meet the standards and expectations appropriate to higher education, faculty need to incorporate teaching, scholarship, and service in their work, whether they serve full-time or less than full-time. The academic freedom that enlivens and preserves the value of academic work is protected by a responsible and reasonable commitment between the university or college and the faculty member. For the good of higher education and the good of society as a whole, this commitment must be preserved for all faculty. But the majority of faculty members now work without such a commitment from their institutions, and therefore without adequate protection of academic freedom.

This report has identified some of the real costs of overreliance on part-time and non-tenure-track faculty: costs to the quality of student learning, to equity among academic colleagues, to the integrity of faculty work, and to academic freedom. These costs are now borne primarily by students and by contingent faculty. In the long term, however, the cost of cutting corners on education will be borne by society as a whole as it gradually loses its independent academic sector.

For the good of institutions, of the educational experiences of students, and of the quality of education, the proportion of tenured and tenure-track faculty should be increased. Institutions that are now experimenting with ways to increase the proportion of tenured and tenure-track faculty are finding that the way back is complicated and somewhat treacherous. The guidelines for transition presented here do not offer a complete blueprint; they are intended instead as a beginning diagram or sketch to assist faculty and administrators who have made a commitment to change the structure of their faculty appointment and reappointment processes. Many details described in this report are left to the judgment of faculty members working within their institutional governance structures. Good-faith efforts to strengthen the commitment between institutions and the faculty members who carry out their academic missions will improve the quality of education offered at these institutions while preserving the integrity of the academic profession.

Addendum: Previous Reports on Contingent Faculty

Over the past few decades, the Association and its committees have issued a number of statements and reports on part-time and non-tenure-track faculty. In 1979, at the request of the Committee on Women in the Academic Profession, Committee A on Academic Freedom and Tenure created a summary entitled Academic Freedom and Due Process for Faculty Members Who Serve Less Than Full Time. The text of the summary follows:

The 1940 Statement of Principles on Academic Freedom and Tenure calls for academic freedom for all who are engaged in teaching or research, and Committee A’s Recommended Institutional Regulations on Academic Freedom and Tenure includes provisions for due process for all faculty members, including those who serve less than full time. Regulation 1a specifies that “the terms and conditions of every appointment to the faculty will be stated or confirmed in writing, and a copy of the appointment document will be supplied to the faculty member. Any subsequent extensions or modifications of an appointment, and any special understandings, or any notices incumbent upon either party to provide, will be stated or confirmed in writing and a copy will be given to the faculty member.” Regulation 14a, which would be applicable to part-time faculty in any case where Regulations 5 and 6 [on dismissal for cause] may not be, calls for a “statement of reasons and an opportunity to be heard before a duly constituted committee” prior to involuntary termination before the end of a period of appointment. Under Regulation 14b, a part-time faculty member who alleges a violation of academic freedom, or improper discrimination in the context of a nonreappointment, can, upon establishing a
and universities “consider creating a class of regular part-time faculty members” who could qualify for tenure in less-than-full-time appointments. The 1987 statement acknowledges the professional nature of all faculty work and urges that all faculty, part time as well as full time, be included in all aspects of the work of the profession.

Setting aside that group, the 1980 report then focuses on part-time faculty. Citing a “common concern for academic quality,” the report recommends that attention be given to “appropriate review of the qualifications of part-time faculty members, their participation in the planning and implementation of the curriculum, their availability to students for advice and counseling, their ability to keep current in their respective fields, and the chilling effect on their teaching which lack of the protections of academic due process may engender.” Thus, the 1980 report acknowledges the professional nature of all faculty work and urges that all faculty, part time as well as full time, be included in all aspects of the work of the profession.

The 1980 report also addresses, for the first time, the issue of tenure for part-time faculty, proposing that colleges and universities “consider creating a class of regular part-time faculty members” who could qualify for tenure in less-than-full-time appointments. The 1987 statement Senior Appointments with Reduced Loads clarifies that such arrangements might be useful not only for faculty members seeking a reduced workload as a step toward retirement but also for those seeking to balance family and professional responsibilities. The statement recommends that opportunity should exist for the faculty member to move from a full to a reduced load and back to full-time status, depending on the needs of the individual and the institution.

In 1986, in a report titled On Full-Time Non-Tenure-Track Appointments, Committee A described the efforts of a subcommittee to assess the “current dimensions” of the practice of appointing full-time non-tenure-track faculty and to analyze the adverse implications of the continuing proliferation of these appointments. The 1986 report also addresses the stated reasons for such appointments and their observable effects on higher education. Institutions defend non-tenure-track appointments primarily in terms of cost savings and flexibility, but the report observes that direct savings were possible in the short term and only at an “inordinately high cost to the quality of the entire academic enterprise.” The assertion that non-tenure-track faculty appointments were needed for flexibility to meet changing student demand, the subcommittee reported, was belied by the extensive (and, we could say now, continuing and long-term) use of such appointments in core academic courses, especially in the humanities.

The 1986 report notes that the proliferation of non-tenure-track appointments created a divided faculty, in which a large proportion of teachers was not involved in curricular and academic decision making, not supported in scholarship, and neither compensated nor recognized for advising and other services that make up the whole of faculty work. The committee surmises that this situation undermined the attractiveness and economic security of the academic profession, and sent a message that prospective faculty members would be wise to seek careers in commercial and other sectors.

In 1993, the Association adopted as policy The Status of Non-Tenure-Track Faculty. That report, written at a time when about half of all faculty appointments in American higher education were off the tenure track, takes a fresh look at non-tenure-track faculty, both part- and full-time, as a group. The report catalogues the increase of both kinds of appointments, the exploitation of faculty in such positions, and the accelerating negative effects of these practices on higher education. Several topics are addressed with greater specificity than in previous statements. These include the need for job security, benefits, and opportunities for advancement; the need for participation in governance; and the conversion of part-time appointments to tenure-track positions. The basic premise of the 1993 report is the necessity for the replacement of contingent positions with tenured positions for most faculty. Then, as now, the Association was unwilling to assent to the establishment of a subordinate tier of faculty members, without full status and responsibility within the academy.

Notes
2 Douglas McGray, “Title Wave,” New York Times, August 4, 2002. McGray notes that “the Army has fewer titles to classify soldiers (twenty-four from private through general) than a typical research university has to classify teachers (forty from teaching fellow to
professor emeritus, at Harvard."

3 Long-standing Association policy determines fulltime status by the individual’s functions in the institution, not by his or her title. The 1970 “Interpretive Comments” to the 1940 “Statement of Principles on Academic Freedom and Tenure” states: “The concept of ‘rank of full-time instructor or a higher rank’ is intended to include any person who teaches a full-time load, regardless of the teacher’s specific title.” AAUP, Policy Documents and Reports, 10th ed. (Washington, D.C., 2006), 6. Many part-time faculty teach at several institutions, so that their aggregate amount of work equals or exceeds the equivalent of a full-time load. Even so, their relationship to each institution is that of a part-time faculty member.

4 For example, instruction in the performance of an unusual musical instrument or in the application of a particular computer program to a specific industry.

5 This report does not address the complexities of “clinical” faculty appointments in disciplines such as law, social work, and health sciences. The Association addressed clinical appointments in medical schools in “Tenure in the Medical School” (1995), in Policy Documents and Reports, 10th ed., 119–24. That report states, in part, “To the extent that a faculty appointment at a medical school resembles a traditional academic appointment, with clearly understood obligations in teaching, research, and service, the burden of proof on the institution is greater to justify making the appointment non-tenure-track position.” This provision may well be applicable to clinical appointments in other disciplines.

6 Valerie Martin Conley, supplemental table updates to Part-Time Instructional Faculty and Staff: Who They Are, What They Do, and What They Think (U.S. Department of Education, National Center for Education Statistics’ Web site at http://nces.ed.gov/pubs2002_/quarterly/summer/42.asp). Calculations are based on tables 4, 18, and 31. According to table 18, part-time instructors rely on income from their academic work for up to 44 percent of their total income. The original source of much of the data used in this statement is the National Study of Postsecondary Faculty, which may systematically underrepresent the number of part-time faculty. Faculty are included in the survey only when information on them is available through a central institutional list; when they are available at the same institution for a period of several months, perhaps extending over two terms; and when they can be reached through the institution to complete the survey. Adjunct faculty who teach one or two courses at a time on several different campuses may be unlikely to meet these three conditions.

13 Ibid., table 6. “Full-time faculty” includes tenured, tenure-track, and non-tenure-track faculty.

17 Conley, Part-Time Instructional Faculty and Staff, table 30.

18 NCES, Digest of Education Statistics, table 330. Many colleges, including public colleges, sell some of their services locally and internationally. This category may also include fees for the use of facilities, conference income, and the like.

21 Ernst Benjamin, “Reappraisal and Implications for Policy and Research” [of excessive reliance on contingent appointments], New Directions for Higher Education 123 (October 2003): 79–113. According to Benjamin, full-time contingent faculty spend about the same amount of time on instructional activities as tenured and tenure-track faculty, but for contingent faculty, more of that time is spent in teaching. Thus, the time available for interaction with students, and for preparation and assessment outside of class is significantly lower on a per-credit basis than it is for probationary tenure-track faculty.

22 Benjamin’s tables are based on data from the 1999 National Study of Postsecondary Faculty, and include all work hours, paid and unpaid, attributed to an institution by part-time faculty. For full-time faculty, “nonclassroom instructional time” includes time for grading papers, preparing courses, developing new curricula, advising or supervising students, and working with student organizations or intramural activities.

23 For examples, see Conley, Part-Time Instructional Faculty and Staff, tables 36–39 and 40–47.
